

A5: Relational schema, validation and schema refinement

Our project, Answerly, is a web application for collaborative Questions and Answers.

This artifact contains the Relational Schema obtained by mapping from the Conceptual Data Model. The Relational Schema includes the relation schema, attributes, domains, primary keys, foreign keys and other integrity rules: UNIQUE, DEFAULT, NOT NULL, CHECK...

1. Relational Schema

Relation Reference	Relation Compact Notation
R01	User (userID , firstName <i>NN</i> , lastName <i>NN</i> , email <i>UK NN</i> , description, username <i>UK NN</i> , password <i>NN</i> , score <i>DF 0</i>)
R02	Label (labelID , name <i>NN</i>)
R03	Notification (notificationID , content <i>NN</i> , date <i>DF Today</i> , viewed <i>DF False</i> , userID → user <i>NN</i>)
R04	UserManagement (managementID , state <i>NN</i> , status <i>NN</i> , userID → User <i>NN</i>)
R05	Moderator (userID → User)
R06	Administrator (userID → Moderator)
R07	Vote (voteID , like, dislike, userID → User <i>NN</i> , questionID → Question, answerID → Answer <i>CK questionID = NN XOR answerID = NN</i>)
R08	Question (questionID , userID→User <i>NN</i> , title <i>NN</i> , description <i>NN</i> , nrLikes <i>NN DF 0</i> , nrDislikes <i>NN DF 0</i> , questionDate <i>NN DF Today</i>)
R09	Answer (answerID , userID→User <i>NN</i> , questionID→Question <i>NN</i> , answerDate <i>NN DF Today</i> , content <i>NN</i> , nrLikes <i>NN DF 0</i> , nrDislikes <i>NN DF 0</i>)
R10	Comment (commentID , userID→User <i>NN</i> , questionID→Question, answerID→Answer <i>CK questionID = NN XOR answerID = NN</i> , content <i>NN</i> , commentDate <i>NN DF Today</i>)
R11	Report (reportID , userID→User, questionID→Question, answerID→Answer, commentID→Comment <i>CK userID = NN XOR questionID = NN XOR answerID = NN XOR commentID = NN</i>)
R12	ReportStatus (statusID , reportID→Report, state <i>NN DF unresolved CK state IN States</i> , comment, responsibleUser→Moderator <i>NN</i>)
R13	MarkedAnswer (questionID →Question, answerID →Answer)
R14	Following (userID → User, labelID → Label)
R15	About (questionID → Question, labelID → Label)

- UK means UNIQUE KEY
- NN means NOT NULL
- DF means DEFAULT
- CK means CHECK

2. Domains

Specification of additional domains:

Domain Name	Domain Specification
Today	DATE DEFAULT CURRENT DATE
States	ENUM ('unresolved', 'reviewing', 'resolved')

3. Functional Dependencies and schema validation
