A5: Relational schema, validation and schema refinement

Our project, answerly, is a web application for collaborative questions and answers.

This artifact contains the Relational Schema obtained by mapping from the Conceptual Data Model. The Relational Schema includes the relation schema, attributes, domains, primary keys, foreign keys and other integrity rules: UNIQUE, DEFAULT, NOT NULL, CHECK...

1. Relational Schema

Relation Reference	Relation Compact Notation
R01	user(id , first_name <i>NN</i> , last_name <i>NN</i> , email <i>UK NN</i> , bio, username <i>UK NN</i> , password <i>NN</i> , score <i>DF 0</i>)
R02	label(id , name <i>NN</i>)
R03	notification(id , content <i>NN</i> , date <i>DF Now</i> , viewed <i>DF False</i> , user_id \rightarrow user <i>NN</i>)
R04	user_management(id , status <i>NN</i> , user_id → user <i>UK NN</i>)
R05	vote(id , vote, user_id \rightarrow user NN, question_id \rightarrow question, answer_id \rightarrow answer CK question_id = NN XOR answer_id = NN)
R06	question(id , user_id \rightarrow user NN, title NN, description NN, nr_likes NN DF 0, nr_dislikes NN DF 0, question_date NN DF Now CK nr_likes >= 0 AND nr_dislikes >= 0)
R07	answer(id , user_id \rightarrow user <i>NN</i> , question_id \rightarrow question <i>NN</i> , answer_date <i>NN DF Now</i> , content <i>NN</i> , nr_likes <i>NN DF 0</i> , nr_dislikes <i>NN DF 0</i> , marked_answer <i>NN DF FALSE CK</i> nr_likes >= 0 AND nr_dislikes >= 0)
R08	comment(id , user_id → user <i>NN</i> , question_id → question, answer_id → answer <i>CK</i> question_id = NN XOR answer_id = NN, content NN, comment_date NN DF Now)
R09	report(id , user_id → user, question_id → question, answer_id → answer, comment_id → comment <i>CK user_id = NN XOR question_id = NN XOR answer_id = NN XOR comment_id = NN</i>)
R10	report_status(id , report_id \rightarrow report, state <i>NN DF unresolved CK state IN States</i> , comment, responsible_user \rightarrow user_management <i>NN</i>)
R11	following(user_id → user, label_id → label))
R12	about(question_id → question, label_id → label)

- UK means UNIQUE KEY
- NN means NOT NULL
- DF means DEFAULT
- CK means CHECK

2. Domains

Specification of additional domains:

Domain Name	Domain Specification
Now	DATE DEFAULT CURRENT_TIMESTAMP_
Report States	ENUM ('unresolved', 'reviewing', 'resolved')
User Status	ENUM ('normal', 'moderator', 'administrator', 'banned')

3. Functional Dependencies and schema validation

In the following tables, all relations are in the Boyce-Codd Normal Form, since for each non trivial functional dependency $A \rightarrow B$, A is a (super)key of the relation.

Table R01 (user)	
Keys : {id}, {username}, {email}	,
Functional Dependencies	
FD0101	{id} → {first_name, last_name, email, bio, username, password, score}
FD0102	{username} → {user_id, first_name, last_name, email, bio, password, score, marked_answer}
FD0103	{email} → {user_id, first_name, last_name, bio, username, password, score}
NORMAL FORM	BCNF
Table R02 (label)	
Keys: {id}	
Functional Depender	ncies
FD0201	{id} → {name}
NORMAL FORM	BCNF
Table R03 (notification	on)
Keys: {id}	
Functional Depender	ncies
FD0301	{id} → {content, date, viewed, user_id}
NORMAL FORM	BCNF

_		
Table R04 (user_man	agement)	
Keys: {id}		
Functional Depende	ncies	
FD0401	$\{id\} \rightarrow \{status, user_id\}$	
NORMAL FORM	BCNF	
Table R05 (vote)		
Keys: {id}		
Functional Depende	ncies	
FD0501	$\{id\} \rightarrow \{vote, user_id, question_id\}$	_id, answer_id}
NORMAL FORM	BCNF	
Table R06 (question)		
Keys: {id}		
Functional Depende	ncies	
FD0601	{id} → {user_id, title, descriptio	on, nr_likes, nr_dislikes, question_date}
NORMAL FORM	BCNF	
Table R07 (answer)		
Keys: {id}		
Functional Dependencies		
FD0701	{id} → {user_id, question_id, answer}	er_date, content, nr_likes, nr_dislikes,
NORMAL FORM	BCNF	
Table R08 (comment)	
Keys: {id}		
Functional Depende	ncies	
FD0801	{id} → {user_id, question_id, ar	nswer_id, content, comment_date}
NORMAL FORM	BCNF	
Table R09 (report)		

Keys: {id}

Table R09 (report)

Functional Dependencies	
FD0901	$\{id\} \rightarrow \{user_id, question_id, answer_id, comment_id\}$
NORMAL FORM	BCNF
Table R10 (report_status)	
Keys: {id}	
Functional Dependencies	
FD1001	{id} → {report_id, state, comment, responsible_user}
NORMAL FORM	BCNF
Table R11 (following)	
Keys : {user_id, label_id}	
Functional Dependencies	
(none)	
NORMAL FORM	BCNF
Table R12 (about)	
	

Keys: {question_id, label_id}

Functional Dependencies

(none)

NORMAL FORM BCNF

4. SQL Code

```
-- Table: user
DROP TABLE IF EXISTS "user" CASCADE;
CREATE TABLE "user" (
   id
                    SERIAL
                                     PRIMARY KEY,
    first_name
                    TEXT
                                     NOT NULL,
                                     NOT NULL,
    last_name
                    TEXT
    email
                                     NOT NULL UNIQUE,
                    TEXT
    bio
                    TEXT,
                                     NOT NULL UNIQUE,
    username
                    TEXT
                                     NOT NULL,
    password
                    TEXT
    score
                    INTEGER
                                     NOT NULL DEFAULT 0
);
-- Table: label
```

```
DROP TABLE IF EXISTS label CASCADE;

Revision history

- 1. First submission (23/03/2020).
- 2. Deleted Administrator and Moderator tables. Changed all id's to "id" and other minor changes (28/03/2020).
- 3. Tested sql code, fixed some errors (29/03/2020).
