A5: Relational schema, validation and schema refinement

Our project, Answerly, is a web application for collaborative Questions and Answers.

This artifact contains the Relational Schema obtained by mapping from the Conceptual Data Model. The Relational Schema includes the relation schema, attributes, domains, primary keys, foreign keys and other integrity rules: UNIQUE, DEFAULT, NOT NULL, CHECK...

1. Relational Schema

Relation Reference	Relation Compact Notation
R01	user(ID , first_name <i>NN</i> , last_name <i>NN</i> , email <i>UK NN</i> , bio, username <i>UK NN</i> , password <i>NN</i> , <i>DF 0</i>)
R02	label(ID , name <i>NN</i>)
R03	notification(ID , content <i>NN</i> , date <i>DF Now</i> , viewed <i>DF False</i> , user_id \rightarrow user <i>NN</i>)
R04	user_management(managementID , status <i>NN</i> , user_id → user <i>NN</i>)
R05	vote(ID , vote, user_id \rightarrow user <i>NN</i> , question_id \rightarrow question, answer_id \rightarrow answer <i>CK</i> question_id = <i>NN XOR answer_id</i> = <i>NN</i>)
R06	question(ID , user_id \rightarrow user <i>NN</i> , title <i>NN</i> , description <i>NN</i> , nr_likes <i>NN DF 0</i> , nr_dislikes <i>NN DF 0</i> , question_date <i>NN DF Now</i> , marked_answer \rightarrow answer <i>DF null</i>)
R07	answer(ID , user_id \rightarrow user <i>NN</i> , question_id \rightarrow question <i>NN</i> , answer_date <i>NN DF Now</i> , content <i>NN</i> , nr_likes <i>NN DF 0</i> , nr_dislikes <i>NN DF 0</i>)
R08	comment(ID , user_id \rightarrow user <i>NN</i> , questionID \rightarrow Question, answerID \rightarrow Answer <i>CK question_id</i> = <i>NN XOR answer_id</i> = <i>NN</i> , content <i>NN</i> , comment_date <i>NN DF Now</i>)
R09	report(\mathbf{ID} , userID \rightarrow User, questionID \rightarrow Question, answerID \rightarrow Answer, commentID \rightarrow Comment <i>CK user_id = NN XOR question_id = NN XOR answer_id = NN XOR comment_id = NN</i>)
R10	report_status(ID , report_id \rightarrow report, state <i>NN DF unresolved CK state IN States</i> , comment, responsible_user \rightarrow user_management <i>NN CK responsible_user.status</i> = moderator OR responsible_user.status = administrator)
R11	following(userID → user, labelID → label))
R12	about(questionID → question, labelID → label)

- UK means UNIQUE KEY
- NN means NOT NULL
- DF means DEFAULT
- CK means CHECK

2. Domains

Specification of additional domains:

	Domain Name	Domain Specification	
	Now	DATE DEFAULT CURRENT_TIMESTAMP_	
-	Report States	ENUM ('unresolved', 'reviewing', 'resolved')	
	User Status	ENUM ('normal', 'moderator', 'administrator', 'banned')	

3. Functional Dependencies and schema validation

In the following tables, all relations are in the Boyce-Codd Normal Form, since for each non trivial functional dependency $A \rightarrow B$, A is a (super)key of the relation.

,		
Table R01 (user)		
Keys : {id}, {username}, {email}		
Functional Dependencies		
FD0101	{id} → {first_name,	last_name, email, bio, username, password, score}
FD0102	$\{username\} \rightarrow \{user_id, \ first_name, \ last_name, \ email, \ description, \ password, \\ score, \ markedAnswer\}$	
FD0103	{email} → {user_id, first_name, last_name, description, username, password, score}	
NORMAL FORM	BCNF	
Table R02 (label)		
Keys: {id}		
Functional Depender	ncies	
FD0201	{id} → {name}	
NORMAL FORM	BCNF	
Table R03 (notification	on)	
Keys: {id}		
Functional Depender	ncies	
FD0301	{id} → {content, date, viewed, user_id}	
NORMAL FORM	BCNF	

Table R04 (user_managem	ent)		
Keys: {id}			
Functional Dependencies			
FD0401	{id} → {status, user_id}		
NORMAL FORM	BCNF		
Table R05 (vote)			
Keys: {id}			
Functional Dependencies			
FD0501	{id} → {like, dislike, user_id, qu	estion_id, answer_id}	
NORMAL FORM	BCNF		
Table R06 (question)			
Keys: {id}			
Functional Dependencies			
FD0601	D0601 {id} → {user_id, title, description, nr_likes, nr_dislikes, question_date}		
NORMAL FORM	BCNF		
Table R07 (answer)			
Keys: {id}			
Functional Dependencies			
FD0701	00701 {id} → {user_id, question_id, answer_date, content, nr_likes, nr_dislikes}		;}
NORMAL FORM	BCNF		
Table R08 (comment)			
Keys: {id}			
Functional Dependencies			
FD0801	{id} → {user_id, question_id, ar	nswer_id, content, comment_date}	
NORMAL FORM	BCNF		
Table R09 (report)			
Keys: {id}		<u></u>	
Functional Dependencies			

Table R09 (report)

FD0901	{id} → {user_id, question_id, answer_id, comment_id}
NORMAL FORM	BCNF

Table R10 (report_status)

Keys: {id}

Functional Dependencies

FD1001 {id} → {report_id, state, comment, responsible_user}

NORMAL FORM BCNF

Table R11 (following)

Keys: {user_id, label_id}

Functional Dependencies

(none)

NORMAL FORM BCNF

Table R12 (about)

Keys: {question_id, label_id}

Functional Dependencies

(none)

NORMAL FORM

BCNF

4. SQL Code

```
-- Table: user
DROP TABLE IF EXISTS "user" CASCADE;
CREATE TABLE "user" (
    id
                                     PRIMARY KEY,
                     SERIAL
                                     NOT NULL,
    first_name
                     TEXT
    last name
                                     NOT NULL,
                    TEXT
    email
                                     NOT NULL UNIQUE,
                     TEXT
    bio
                    TEXT,
    username
                    TEXT
                                     NOT NULL UNIQUE,
    password

Revision history

- 1. First submission (23/03/2020).
- 2. Deleted Administrator and Moderator tables. Chaned all id's to "id" and other minor changes.
